

KALARE

Advancing productivity and efficiency for your R&F needs.

Kalare™ is an advanced R&F system from Toshiba developed with input from working clinicians. This system provides complete tableside control for starting exam, acquisition parameters, dose management, and DICOM send to allow for exceptional patient care and productivity.

DESIGNED FOR HIGH IMPACT PERFORMANCE

- Complete tableside control to optimize procedural and clinical management
- Bariatric friendly with a combination of high table weight capacity, high heat capacity X-ray tube and a powerful generator to treat a wider range of patients
- Feature rich to meet clinical and economic needs

““ The versatility of Toshiba’s Kalare X-ray system coupled with its high-quality images resulted in immediate improvements in patient care, increased overall workflow and eliminated the need for conventional film. ””

Freddie Gibson, RT
Director of Medical Imaging Services
Nacogdoches Memorial Hospital

Kalare is available with three different Image Intensifier (I.I.) sizes, high-speed digital processor and standard features to ensure high value and performance for years to come.

EASY AND CONVENIENT TO USE

- Ergonomic controls for fast and comfortable single-handed operation
- Color LCD display allows you to review exam parameters at a glance and change settings with simple touch-screen control
- Smart user interface helps you to perform tasks efficiently

| System Specifications | |
|-------------------------|--|
| Table Tilt | 90°/45° |
| Table Weight Capacity | 350 lbs. Dynamic 500 lbs. Static ¹ |
| Image Intensifier | 12", 14" or 16" I.I. |
| Tablesides User Control | Color LCD Touch Panel |
| Generator Output | 80 kW 40-150 kVp |
| Dose Management | 3 Dose Mode Standard 6 Pulse Fluoro Settings ² |
| Tube Specifications | 600 kHU 0.6/1.0 ² |

1. When table is in horizontal position and tabletop is centered
2. For system equipped with pulse fluoro
